

# SCHOOL PROGRAM IMPACT 2022

## PERSONAL WELLBEING INDEX

PWI measures life satisfaction and wellbeing against 7 domains of life (standard of living, health, achievement, relationships, safety, connection to community, and future security)

63% of girls who completed the program scored in or above the "normal" range of wellbeing at the end of the program. At the start of the program, this was only 54%. Almost all participants demonstrated some improvement but the remaining 37% still fall below the "normal" range"

### POSITIVE

Used positive emotions to describe their experience of the program

### CHANGE

Identified positive changes in their life through participating

### YES PLEASE

I'd love another program

The data shows that our school program was highly impactful.

However it also shows that this target group (youth girls) are consistently below the normal ranges for wellbeing. The implication being they are under resourced for the demands that life is presenting them with.
